

Electricity

Reliable. Affordable. Environmentally Responsible.

What On Earth Could Be Better?

The 23 locally owned and controlled not-for-profit power systems that comprise the Large Public Power Council (LPPC) are working 24/7 to provide their customers with electricity that is reliable, affordable and environmentally responsible. That means lower levels of greenhouse gases through energy efficiency, conservation and increased use of renewable resources such as solar and wind. It also means lower electric bills for most of the more than 45 million people in 10 states and Puerto Rico currently served by public power.

For more information visit www.lppc.org.
